

HYGIENE AND SAFETY MEASURES

We took the necessary measures, please comply with the standards

In view of the current situation following the pandemic COVID-19, **Unisub Estartit** has been guiding its performance by an attitude of responsibility in relation to the measures defined by the Spanish Ministry of Health, assuming the safety of its guests and employees as a priority.

For the safety of all of us, **Unisub Estartit**, has adopted hygiene and safety measures that promote the common well-being and contribute to the control and mitigation of Covid 19. We are glad to share them with you and we appreciate your cooperation and the compliance with the defined guidelines.

Before arrival

We suggest that all reservations are done in advance, preferably by e-mail. Please send us by e-mail your diving qualification, diving insurance and medical certificate. We will also send you a self medical declaration to fill out.

During your stay

The safety distance between staff and guest will be maintained in all the spaces of our diving center, avoiding physical contact. This safety distance will not always be possible, especially onboard, so we recommend all our divers to use their own protective mask or visor. All our staff are using their own protective mask in order to guarantee the safety. Before entering and leaving the water, as you cannot use the protective mask or visor, don't take off your diving mask and regulator until you put the protective mask back on. Disinfect your hands whenever you enter or exit the diving center and boats. Please use the various sanitation points available in the diving center and boats. Don't spit in the mask 😊, anti fog spray will be provided onboard.

If necessary, your body temperature will be measured before you enter the boats for the first time. Your diving equipment, must be transported in your own closed diving bag. Open box will not be allowed. All personal diving equipment, will be cleaned by yourselves at your local accommodation (hotel, apartment, campsite ...). All rental diving equipment, will be disinfected by our staff at the diving center, following internal procedures.

Cleaning and disinfection

Our team is specifically trained to comply with the internal Protocol regarding COVID-19. We guarantee frequent disinfection of all our surfaces, and we've payed special attention to all direct contact materials. We only use certified disinfectants, all biodegradable. Ozone disinfection machine has been installed in the diving center and diving boat (Triton), so disinfection reaches everywhere. Perhaps all these cleaning and disinfection procedures are a slow process, and can cause delays in the departure of the boats. We apologise in advance. In the same way, we ask all our clients to be punctual before boarding.
